

B I S F A

THE INTERNATIONAL BUREAU
FOR THE STANDARDISATION OF MAN-MADE FIBRES

**Test methods
for
bare elastane yarns**

1998 Edition
(This edition replaces the 1970 edition)

SCOPE

These methods apply to all continuous bare elastane yarns wound on spools.

Appendix I sets out the definition of elastane to which these methods apply.

CONTENTS

	Page
Scope	2
Introduction	7
Preface	8
Chapter 1 GENERAL RULES FOR SETTLING OF DISPUTES	9
Chapter 2 DEFINITIONS	11
Chapter 3 SAMPLING	17
3.1 General remarks	17
3.2 Taking the consignment sample and number of containers to be sampled	17
3.3 Taking the laboratory samples for determination of commercial mass	18
3.3.1 Determination of the invoice mass and gross mass of the consignment sample	18
3.3.2 Taking packages from the containers of the consignment sample	18
3.3.3 Determination of the net mass of sampled containers	19
3.4 Taking laboratory samples for determination of properties other than commercial mass	19
3.4.1 Packages to be used as laboratory samples	19
Chapter 4 DETERMINATION OF COMMERCIAL MASS	20
4.1 Scope	20
4.2 Principle	20
4.2.1 Conventional allowance	20
4.3 Apparatus and materials	20
4.4 Test procedure	21

4.4.1	Preparing the laboratory samples and test specimens for determination of commercial mass	21
4.4.2	Determining the mass of the test specimens	21
4.4.3	Performing the test	21
4.4.4	Data to be collected	22
4.5	Calculation of results and number of tests	22
4.5.1	Verification factor	22
4.5.2	Number of tests	22
4.5.3	Weighted verification factor	23
4.5.4	Calculation of the commercial mass of the consignment	23
4.6	Verification of invoice mass	23
4.7	Presentation of results	23
Chapter 5	DETERMINATION OF LINEAR DENSITY	25
5.1	Scope	25
5.2	Principle	25
5.3	Apparatus	25
5.3.1	An appropriate cutting device	25
5.3.2	A balance	25
5.4	Test procedure	25
5.4.1	Operating conditions	25
5.4.2	Preparing the test specimens and performing the test	25
5.4.3	Data to be collected	26
5.5	Calculation of linear density and number of test	26
5.6	Commercial tolerance for linear density	27
5.7	Presentation of results	27
Chapter 6	TENSILE PROPERTIES	28
6.1	Scope	28
6.2	Principle	28
6.3	Apparatus	28
6.3.1	Instrument	28
6.3.2	Specimen holder or clamps	29
6.3.3	General testing facilities	29
6.4	Preparation of laboratory samples	30
6.5	Test procedure	30
6.5.1	Operating conditions	30
6.5.2	Preparation of test specimen and loading procedure	31
6.5.3	Performance of test	32
6.5.4	Number of tests	32
6.5.5	Yarn slippage through the clamps	32
6.5.6	Modifications to the test procedure	32

6.5.7	Data to be collected	32
6.6	Calculation of test results	33
6.6.1	Measured values	33
6.6.2	Calculation of elongation	33
6.7	Presentation of results	33
6.8	Tolerance	34
6.9	Principle of the specimen holder option A, B and C as described in 6.3.2	34
Chapter 7	VISCOELASTIC PROPERTIES	37
7.1	Scope	37
7.2	Principle	37
7.3	Apparatus	38
7.3.1	Instrument	38
7.3.2	Clamps	38
7.3.3	General testing facilities	39
7.4	Preparation of laboratory samples	39
7.5	Test procedure	39
7.5.1	Operating conditions	39
7.5.2	Preparation of test specimen and loading procedure	40
7.5.3	Performance of test	41
7.5.4	Number of tests	41
7.5.5	Yarn slippage through the clamps	42
7.5.6	Modifications to the test procedure	42
7.5.7	Data to be collected	42
7.6	Calculation and evaluation of test results	43
7.6.1	Measured values	43
7.6.2	Calculation of permanent deformation (%)	43
7.6.3	Calculation of hysteresis index H_5	44
7.6.4	Calculation of hysteresis ratio	44
7.6.5	Evaluation of relaxation properties	44
7.7	Presentation of results	45
7.7.1	Values of cycle test option A	45
7.7.2	Values of cycle test option B	46
7.8	Tolerance	46
Chapter 8	STATISTICS: TERMINOLOGY AND CALCULATIONS	47
8.1	Individual value	47
8.2	Frequency distribution	47
8.3	Frequency	47
8.4	Arithmetic mean	48

8.5	Overall arithmetic mean	48
8.6	Variance and standard deviation	48
8.7	Coefficient of variation	49
8.8	Confidence limits	49
8.9	Number of tests	50
Appendix I	DEFINITION OF ELASTANE	52
