Testing methods for acrylic staple fibres

2000 EDITION
(This edition replaces the 1989 edition)

Scope

The rules and methods apply to acrylic fibres for textile use, delivered by the producers either as staple in bulk, as tow, or in the form of sliver or tops. These rules do not apply to flock or short-cut fibres.

Acrylic fibres are defined as man-made fibres of linear macromolecules, having in the chain at least 85 % by mass of acrylonitrile repeating units.
